
School Improvement Idea

— Christopher Pappas —

Description Importance to the Beneficiary

- Create a form of protection to prevent weather conditions from harming bikes.
- Every day throughout the academic year, about 30 students ride their bikes to school.
- Harsh weather conditions such as rain, snow, hail, strong winds, etc... can be damaging to bikes. (Rust and corrosion)
- A roof over the bike rack would provide protection from such weather conditions, for biking may be a **primary mode of transportation** for some students.
